

Abstract

The present invention is directed to compounds of the general formula (I)

or pharmaceutical acceptable salts or physiologically functional derivatives thereof wherein:

n is a non-aromatic ring system containing two to seven carbon atoms, wherein the ring system can contain one or two double bonds;

X is C, CH or CH₂;

Y is selected from C, CH, CH₂, S, NR, CH₂-CH₂, H₂C--CH, HC--CH₂, C--CH₂, H₂C--C, or C--C; one or more of the hydrogen atoms can optionally be substituted by one or more substituents R¹;

each of the dotted lines means a single, a double or triple bond with the exclusion of a combination of a triple with triple bond and a double with a triple bond;

R¹ is independently H, -CN, alkyl, cycloalkyl, aminoalkyl, alkylamino, alkoxy, -OH, -SH, alkylthio, hydroxyalkyl, hydroxyalkylamino, halogene, haloalkyl, haloalkyloxy;

R is H, an alkyl or cycloalkyl group;

Z is CH, C, or P;

p is 0 or 1.
